Viega Profipress G for outside lines

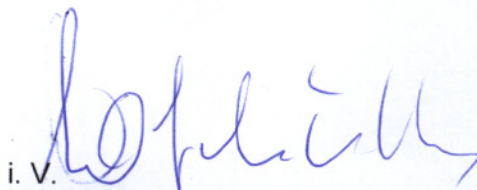

Dear Mr. Makeschin,

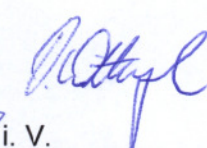

Profipress G can be used and is approved in surrounding temperatures between -40°C and + 70°C. Therefore Profipress G can be installed as an above ground outside line according to before mentioned surrounding temperatures. The use of Profipress G for applications with higher or lower temperatures then stated before must be approved by our factory in Attendorn.

The functionality of the Viega press connection systems is primarily dependent on the working condition of the press tools and press tools being used.

The electronical pressgun 4E and the battery pressgun 4B can be used in temperatures between -5°C and +40°C. Due to the latest hydraulic and engine technology the Pressgun Picco can even be used in temperatures between -10°C and +40°C.

Best regards,
Viega GmbH & Co. KG
